

## Monteris® Medical Press Release

**May 13 2014**

### **Monteris MRI Compatible AtamA Stabilization System Available in North America**

**MINNEAPOLIS**

---

Monteris Medical announced today that their 3.0 Tesla magnetic resonance imaging compatible AtamA Stabilization System is available for sale in the US and Canada. The 1.5 Tesla version AtamA System has been available in the US since August, 2011. The AtamA System is the only MR-compatible patient stabilization and management system that can be used to move patients from the operating room into an environment of active MR imaging while maintaining secure head positioning. Clinicians may use the AtamA System's versatile head fixation features for MR-guided neurosurgical procedures, including those applying the Monteris' NeuroBlate System, a minimally invasive ablation tool for brain lesions including tumors.

"We are excited to offer the market a new patient management tool in the area of MR-guided thermal medicine. As the MR transitions from an imaging platform to an image-guided therapy tool, novel products like the AtamA System will streamline procedures and reduce the difficulty of patient transfers. Our corporate goal is to provide neurosurgeons with tools to help optimize image guided therapies" said John Schellhorn, President and CEO of Monteris Medical.

The AtamA System was shown last week during the Society of Thermal Medicine, 31<sup>st</sup> Annual Meeting in Minneapolis, MN.

#### About Monteris® Medical

Monteris Medical is a privately held company developing devices for minimally-invasive, MR-guided neurosurgery. Monteris markets the NeuroBlate System for controlled, volumetric ablation of brain lesions. Monteris also offers the AXiiiS Stereotactic Miniframe; a single use platform for image-guided trajectory alignment, and the AtamA Stabilization System for MR based procedures requiring versatile head fixation.
