

Monteris® Medical's NeuroBlate™ System Selected by LifeScience Alley®: Winner of New Technology Showcase

Minimally-invasive, MRI-guided System for treating brain tumors featured at LifeScience Alley 11th Annual Conference

Plymouth, MN (December 4, 2012)
– Monteris Medical, a privately-held medical device company dedicated to the development of minimally-invasive, MRI-guided neurosurgical solutions, today announced that its NeuroBlate Laser-based Ablation System is one of three selected winners in the New Technology Showcase, to be featured during LifeScience Alley's Eleventh Annual Conference. Monteris will present during the noon general session held on December 5th at the Minneapolis Convention Center in Minneapolis, MN. This year's New Technology Showcase is sponsored by the Mayo Clinic.

"We are excited to be recognized by LifeScience Alley for our innovative NeuroBlate System," said John Schellhorn, President and Chief Executive Officer for Monteris Medical. "We are proud of this technology and the potential benefit it brings to the more than 200,000 Americans diagnosed with brain tumors and intracranial lesions each year. We are committed to providing cutting-edge options for surgeons treating brain cancer."

According to LifeScience Alley, the conference is the largest gathering of medical technology professionals in the Midwest. Finalists for the New Technology Showcase Awards were selected by industry experts from

an array of international applicants with innovative medical device, pharmaceutical, biotechnology and health care delivery products. Selection was based on the novelty of technology, market potential and ability to improve patient outcomes while lowering per capita health care costs. Only 10 companies were selected to showcase their technologies, of which the top 3 finalists, (including Monteris Medical), will be featured during the luncheon general session in front of an anticipated audience of more than 1,600 life science and health care professionals.

About Monteris Medical

Monteris® Medical is a privately held device company dedicated to the development of minimally invasive, MRI-guided neurosurgical solutions. We strive to provide options for surgeons treating brain cancer. The NeuroBlate™ System is a laser-based ablation system for intracranial lesions, including brain tumors. The AXiiiS® Stereotactic Miniframe is a single use platform for image guided device delivery and brain biopsy. The AtamA™ Head Coil and Stabilization System facilitate intra-operative imaging and neurosurgical access for MRI-guided procedures requiring head fixation. Monteris Medical: "A Ray of Light...A Ray of Hope"

About the LifeScience Alley Conference

The largest gathering of life science industry professionals in the Midwest, LifeScience Alley's annual conference brings together global leaders in the life science and health care industry to identify trends, share expertise and network across disciplines. This event includes participants from over 650 organizations worldwide, and is expected to attract 1,500-2,000 attendees this year. The 2012 Conference features three keynote sessions, four interactive breakout sessions and a newly redesigned exhibit hall. The goal of the conference is to equip attendees with information and resources that will help them stay current on "Today's Science. Tomorrow's Healthcare."
